

*We work at the intersection of clean energy and reconciliation — transforming the E&N Railway Corridor into Canada's first Neighbourhood Zero Emission Vehicle system, accelerating the rapid adoption of New Energy Vehicles*

June 2, 2026

## **Victoria EVA**

On Sunday, June 24th, I attended Victoria EVA's first summer meetup. My **BYD Shark** drew a lot of attention and even made it into their newsletter. Thanks for the donuts and coffee!

**EV Island** is shifting its focus to transforming the E&N Railway Corridor into a Low Speed EV road system. The **Island Corridor Foundation** can accomplish this by applying **Neighbourhood Zero Emission Vehicle 24.06 of the BC Motor Vehicle Regulations**. The **ICF** has an opportunity in taking a leading roll in Canada's clean energy transportation efforts.

If you couldn't make it, you missed seeing the first BYD Shark (pictured above) to make it to Canada, driving all the way from Baja California in Mexico and jumping through a lotta lotta hoops to get across the border.

We are eternally inspired by how far some will go to be part of a VicEVA event.

In 1887, the governments of BC and Canada granted the Dunsmuir Company tribal lands for the construction of the E&N Railway without consultation or compensation. In 2011, passenger rail service ceased. In 2023, the Nanoose Bay 1st Nation successfully won a lawsuit, reclaiming 11 acres. At least four other First Nations, including Halalt and Cowichan Tribes, are following suit to reclaim their ancestral lands. With **ICF** support and government funding, these First Nations could repurpose this deteriorating asset into a major project opening up vast tracts of land for housing and commercial development.
